DOUG SCOTT ON EVEREST

After two months of procrastination and many non-commitments, I am finally reviewing the lecture-slide show by Doug Scott, a summit member of the British Southwest Face Expedition.

Those of PATC who ventured to Baltimore the night of March 22 were richly rewarded with a superb photographical show of the "hardest climb on the hardest mountain of the world." The Himalayan photography was outstanding, and it was narrated well by Scott, who livened the evening with his brand of humor.

The show began chronologically with the march from Kathmandu through the highlands to basecamp and the slides were right out of Tolkien's Trilogy. You could almost see hobbits bounding around the scenery. The usual member shots were shown, somewhat reminiscent of a high school yearbook. Then on to the climbing sequences, interspersed with photos of previous SW face expeditions, and thoughts about the failures

Next month's UP ROPE will be a combined July/August issue which, due to vacation schedules, will probably be out sometime in late July. The regular meeting and training will be held in July but of the past expeditions and improvements made to atone for them. Of course the most radical was the route change to try the left gulley, and the subsequent success of this route. When the summit was gained, the usual summit photographs were taken, and Scott was selling copies autographed after the show for \$3.00. The funny thing about this was the same photo was available from <u>Summit</u> magazine's article on the expedition.

Again, the overall quality of the photography was superb--those of you who have read Bonington's books can get an idea of what you may have missed. But the show did slow at some points, lasting an hour and forty-five minutes, somewhat long to sit through. And it did end on the note of the death of Mick Burke, which was how the expedition did end, but somehow it seemed to leave you hanging.

Steve Williams

the Section is taking a vacation in August--no meeting or training. Monthly meetings will resume Sept. 8 with training scheduled for the following Sunday. Deadline for the September UP ROPE is Aug. 20.

Hanging Around

Purple Horse, Md. - April 18

Although the mid-summer heat in April made one think more of climbing into a pool than anywhere else, a hardy group of seven gathered at a reasonable hour across from Old Angler's Since the climb had been listed in UP ROPE as a Bunny Climb, we were somewhat disappointed when no bunnies, Easter or otherwise, appeared, but we hiked in to the rocks nevertheless. After the trip leader's rusty memory was refreshed as to the exact location of Purple Horse, a number of climbs were rigged. Hal Kramer stopped by and showed us "the easy way" up the short boulder climbs by the side of the trail. The longer balance climb by the side of the river saw everyone get up it, and the Barn Roof and other overhangs in its vicinity received a good deal of attention in the afternoon, with mixed results.

The consensus that it was a "more than one quart day" received further confirmation at Trav's late in the afternoon.

UP ROPE is the monthly newsletter of the Mountaineering Section (MS) of the Potomac Appalachian Trail Club (PATC) of Washington, D.C. Editorial contributions, letters and comments are welcome, and should be sent to Editor, UP ROPE. 802 New Mark Esplanade, Rockville, Md. 20850. Deadline is the 20th of each month. Subscriptions for MS members are included in dues. Annual subscriptions for non-members are \$3.50. New applicants and current members of PATC may join the MS by requesting sponsorship by a member of the MS. Current PATC members interested only in receiving UP ROPE may subscribe at no additional charge. Send subscriptions and address changes to Circulation Manager, UP ROPE, 1718 N St., N.W., Washington, D.C. 20036

Training at Carderock - April 25

The following students completed training, instructed by Sallie Greenwood, Joe Ney, Rick Todd, and Stevie Smith.

> Eric Williams Mike Harris Mike Cecchini Tom Cook Mark Williams Chris Harris George Underwood Jan Rishein Pete Dessira John Boran Charles Harris Paul Underwood Paul Theriault Mari Hope Pat Donohue (secondary) Skip Henderson (secondary)

The Summit Register

Editor, UP ROPE

An article appeared in the April 1976 issue of UP ROPE describing the use of a pulley system for belaying. Having climbed with partners much heavier than myself and after discussing this article with other climbers experienced in this situation, it appears that a reply is necessary.

I appreciate the reasons for Mr. Loeb's concern and thank him for the time and effort involved in preparing his article. Because information is lacking on the accident, no comment can be made regarding it. In general, the pulley systems as described in the article would not prove practical for effecting a rescue of a fallen climber.

There is basically nothing wrong with using a pulley system for top rope climbing, except perhaps that the total number of links in the system have been increased. On the other hand, nothing is to be gained by using a pulley system for top rope climbing as the climber can be lowered back down to the starting point. In the event of great weight difference the belayer should be tied in or a mechanical belay device tied into a fixed object should be used.

In lead climbing other problems arise. There are a number of protection points on a climb involving carabiners through which the rope passes. A disabled climber being pulled up could go no further than the next protection point. It is very unlikely however that one could pull a fallen climber that far due to the friction of the rope passing through the protection system. Most rope leaders remember quite well times when the rope drag was severe enough that it was almost impossible to pull the rope through the system.

The use of pulley systems (preferably carabiners with nylon sheaves) can be used for some rescues. But, because of friction, one climber can hardly handle more than a haul sack (see Fig. I). Generally, unless the climber being rescued can be lifted without the rope touching the rocks, three or more people will be needed to do the pulling even with increased mechanical advantage. Shown below are two rescue systems (Figs. II and III).
